

Manual testing

Day-05 Assignment

1.Explain about Requirement Analysis:

Requirement analysis is the process of defining, evaluating, and clearing up user expectations and project needs for a new or modified product. It involves gathering, organizing, and checking details so that teams build the right thing within time and budget limits.

Key Steps in the Process

- **Elicitation:** Talking to users and clients to find out what they need.
- **Analysis:** Checking if needs are clear, complete, and free of conflicts.
- **Documentation:** Writing down the rules, features, and user stories clearly.
- **Validation:** Confirming with clients that the details match their real goals

2.Functional Requirements of WhatsApp

1. **User Registration** – Users can register using their mobile number with OTP verification.
2. **User Login** – Registered users can securely access their accounts.
3. **Profile Management** – Users can update their profile name, picture, and status.
4. **Chat Messaging** – Users can send and receive text messages instantly.
5. **Media Sharing** – Users can share images, videos, documents, and audio files.
6. **Voice and Video Calling** – Users can make voice and video calls.
7. **Group Chat** – Users can create groups and communicate with multiple users.
8. **Status Update** – Users can post text, image, or video statuses that disappear after 24 hours.
9. **Notifications** – Users receive notifications for new messages and calls.
10. **Privacy and Security** – Users can manage privacy settings, and messages are protected with end-to-end encryption.
